MASTERGRAIN WAS BORN FROM THE SAME TOOLING USED TO CREATE SUPER MACHINES.

Before we shaped doors, we shaped metal and motion with micron-level precision

1962
The Origin of Weber Manufacturing Ltd. | Windsor, Ontario

Founded in Windsor, Ontario, Weber Manufacturing Ltd. began as a tooling company at a time when manufacturing excellence was defined by hand, eye, and instinct. This was an era where mistakes were expensive, and precision was non-negotiable.

1967
Weber Tools & Mold Established

Weber moved to Midland to access highly skilled machinists from the region's shipbuilding heritage, where working at architectural scale demanded uncompromising precision. That same mastery now defines MASTERGRAIN™ door skins, panels, and complete door systems, with large surfaces engineered for exact geometry, fit, and consistency.

1978
Engineering at Full Scale

Weber invested in the largest high-precision 2-spindle copy milling machine of its kind in North America, proving that scale and accuracy could coexist. That same mindset guides MASTERGRAIN today, delivering design freedom, repeatable quality, and long-term performance through high-tolerance door systems.

1989
Tooling for the World's Most Demanding Brands. Nickel Tooling Technology (NTT) Division Established

With the launch of NTT, Weber entered the highest tier of manufacturing, producing tooling for automotive, aerospace, and defense industries–where precision is critical and failure is not an option. That same engineering rigor now defines how MASTERGRAIN door systems are designed, tooled, and built for uncompromising performance.

2000
Mastery of Surface Perfection. Nickel Vapor Deposition (NVD) Plant Built

Weber built one of the world's few Nickel Vapor Deposition facilities, enabling precise transfer of surface texture into durable, repeatable tooling. Proven in automotive applications, this innovation ensures the consistency and quality of MASTERGRAIN door skins.

2008
MASTERGRAIN was Born

After decades of building high-precision tooling for the world's most demanding industries, Weber applied that same rigorous engineering discipline and expertise to exterior doors–creating entry systems designed with aerospace-grade precision and performance.

2018
Expansion into Pre-Hang Manufacturing | Vaughan, Ontario

MASTERGRAIN evolved into a fully engineered door system manufacturer to gain complete control of fit, finish, and performance. This shift also deepened its understanding of customers and end consumers, strengthening R&D and driving meaningful product innovation.

2022
82,000 Sq. Ft. Dedicated MASTERGRAIN Facility | Midland, Ontario

A dedicated facility unified component manufacturing and final assembly, enabling tighter process control, faster development cycles, and system-level quality. It applies the same engineering discipline that was once only required by aerospace and supercar customers to exterior door production.

2024
Launched ARTEMA | Large-Format Custom Fiberglass Doors

Where MASTERGRAIN represents mastery, Artema™ represents freedom. In 2024, after pushing the limits of what fiberglass doors could become, MASTERGRAIN acquired Artema to deliver large-format, highly customized fiberglass door systems that extend beyond today's manufacturing boundaries and are simply not available from conventional door suppliers.

BETTER THAN WOOD.
IT'S MASTERGRAIN.

Every MASTERGRAIN™ panel is molded from real wood master models to deliver depth, texture, and authenticity giving door builders a premium canvas to design distinctive, high-value entryways.

Scan to Explore Warranty

Limited Lifetime Warranty

BEAUTY & PERFORMANCE THAT STAND THE TEST OF TIME

Only MASTERGRAIN offers door manufacturers the design flexibility homeowners demand and the dimensional stability production requires. Our fiberglass panels and components won't warp, rust, or degrade like wood or steel, enabling tighter tolerances, higher first-pass yield, fewer callbacks, and more predictable lead times–protecting margins, throughput, and brand reputation long after the unit leaves the plant.

MASTERGRAIN Fiberglass **VS.** Traditional Wood Door

MASTERGRAIN fiberglass doors are indistinguishable from natural wood doors.

MASTERGRAIN fiberglass doors resist warping, splitting, cracking, rot, and insects much better over time.

THE ONLY FULLY INTEGRATED FIBERGLASS DOOR MANUFACTURER IN THE WORLD.

We are the only fiberglass door manufacturer to **engineer and build our own tooling—and produce every critical door component** from door skins and lite frames to cladding for brickmold, jambs and mullposts in-house.

Every component is cladded with the same fiberglass material that accepts stain evenly delivering consistent tone, depth and wood realism across the entire system.

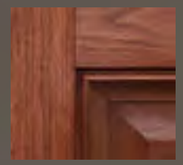

For door builders, this means **unmatched consistency, reliable supply, and total system confidence.**

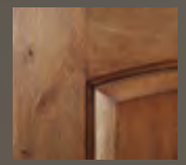

PREMIUM FIBERGLASS PANELS BUILT TO LAST

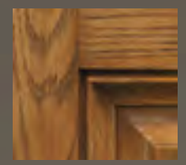

MASTERGRAIN's premium panels deliver exceptional strength, stability, and surface definition. Built to withstand extreme climates and daily use, they maintain their integrity and architectural detail for decades.

UNMATCHED GRAIN VARIETY

ONE-PIECE FIBERGLASS MOLDED DOOR LITE FRAME

One-piece molded fiberglass door lite frames are formed as a single, continuous component, eliminating joints, seams, and fasteners for a clean, precise appearance. Molded from high-performance Sheet Molded Compound (SMC), they deliver a tight fit, consistent sightlines, and long-term dimensional stability.

Compared to wood, vinyl, or aluminum frames, fiberglass will not rot, corrode, warp, or loosen, even under extreme temperature and moisture conditions. The result is a stronger, lower-maintenance frame with superior air and water tightness and lasting structural integrity.

FRAME / SURROUND OPTIONS

Design options for door lite frames span contemporary, traditional, and flush-fit profiles, allowing the glass to complement any architectural style. Contemporary frames feature clean lines and sharp edges for a modern, minimal aesthetic. Traditional profiles incorporate deeper contours and classic detailing for a more decorative look. Flush-fit frames sit level with the door surface, creating a seamless, integrated appearance ideal for modern and transitional designs. Each option delivers precise fit and consistent sightlines, giving designers the flexibility to match the door's character while maintaining a refined, cohesive finish.

* Exclusive to MASTERGRAIN is an integrated, one-piece molded door lite frame and Craftsman dentil shelf, available in woodgrain Fir and Edge Smooth. See pages 58–61.

FIBERGLASS MOLDED SIMULATED DIVIDED LITES

Molded fiberglass simulated divided lites (SDLs) are formed as durable, one-piece profiles that replicate the depth and shadow lines of true divided lites. Each component is precisely notched ensuring accurate alignment, efficient assembly, and consistent sightlines.

Unlike wood or applied grille systems, molded fiberglass SDLs will not rot, warp, or loosen over time. They maintain crisp definition and dimensional stability through temperature swings and moisture exposure, delivering authentic architectural detail with long-term durability and low maintenance.

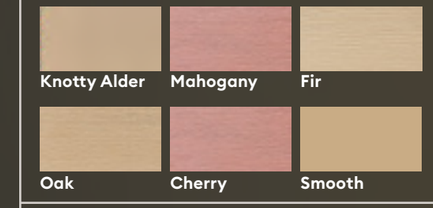

FIBERGLASS CLADDED COMPOSITE COMPONENTS

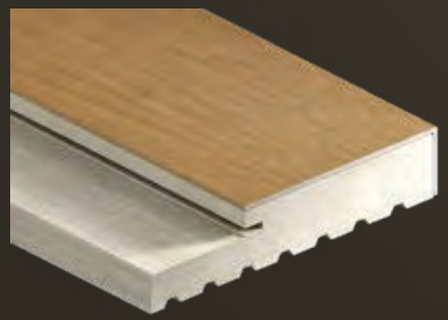

The industry's only NVD fiberglass-cladded components combine a durable structural core with a molded fiberglass exterior, featuring the same authentic woodgrain texture as MASTERGRAIN™ door panels–ensuring perfectly aligned grain patterns and seamless, uniform depth and definition across the entire door system when stained.

- Versatile lengths and widths
- 2X screw holding power due to rigid composite formulation and closed cellular structure
- Rot and moisture resistant
- Stronger than wood door frames
- Low maintenance
- Insect and rodent resistant

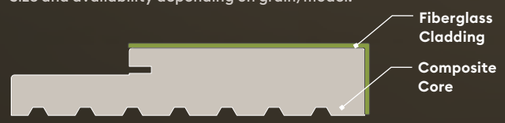

SMC base colors tuned to each woodgrain—beige for Knotty Alder, Oak, Fir and Edge Smooth and rose-beige for Mahogany and Cherry—to support finishing results.

PERFORMANCE TESTING

MASTERGRAIN™ panels are independently tested and verified to meet rigorous performance standards across a wide range of climates and conditions. From energy efficiency and thermal performance to structural integrity and weather resistance, our doors are evaluated to perform reliably in real-world environments – including strong winds, windborne debris, and coastal moisture – making them suitable for use in some of North America's most demanding building zones.

FORCED ENTRY TEST

SCAN TO SEE
OUR PRODUCT
PUT TO TEST

These images and the linked video capture a forced-entry test of a MASTERGRAIN fiberglass panel with lite frame and glass using a standard double-bore lockset. Extreme impact and prying loads are applied at the latch and deadbolt to simulate an aggressive break-in. While the hardware and surrounding stile deform and crack under abuse, the fiberglass panel and integrated lite frame remain fully intact and seated. The glass does not shift or release, proving that the skin, core, and lite frame function as a single structural system, not just a cosmetic assembly.

In practical terms, the test shows that MASTERGRAIN panels can absorb and redistribute severe loads without delamination, frame movement, or glass loss–maintaining opening integrity even when the lockset itself is driven beyond its mechanical limits.

IMPACT TESTED PRODUCTS ARE FOUND UNDER THE FOLLOWING APPROVAL NUMBERS

Non-Impact	Impact	HVHZ
#FL13320	#FL21852	#FL21852.19* #FL21852.49*

Visit www.floridabuilding.org/pr/pr_app_srch.aspx for details.
*Tested with opaque 3'-6" x 8' outswing.
MASTERGRAIN doors are NAFS and ENERGY STAR® Canada Certified. Visit https://oee.nrcan.gc.ca/pml-lmp/index.cfm to view ENERGY STAR Canada certified products.

The MASTERGRAIN™ YourStyle™ Door Collection combines the clean look of a one-panel shaker door with simulated divided lites (SDLs) to create custom patterns on solid or glazed panels. Available in Fir or Edge Smooth, the system is supplied as components rather than pre-assembled units, with standard panels, lineal SDL lengths, and layout drawings that allow fabricators to stock material and efficiently cut and assemble multiple custom door designs as needed.

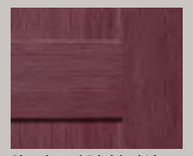

SIZING

Heights	**6'-8"**	**7'**
Widths	**34"**	**36"**

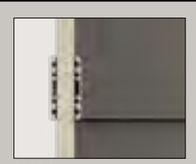

DESIGN & ENGINEERING NOTES

- 2–¼" slab thickness available for doors without glass.
- SDL bars available in 3–½" and 5–⅛" widths.
